

1. Leave a peat pellet in a saucer with warm water over it for 10 - 15 minutes.
2. Place the peat pellet into the mini pot.
3. Carefully push seedstick point first into the peat approximately 20mm deep and firm down gently.
4. Pour a little water over the sealed area to expel trapped air.
5. Do not over water but make sure the peat remains moist while the seeds germinate.
6. The seedlings will emerge in 10 - 14 days. When they form the 3rd set of leaves they are ready to plant out in the garden or larger pot.

**Seed Type  
INSTRUCTIONS**

Finished size when folded shut is 105 x 150mm.  
Allow 2.5 mm of bleed off all edges including centre cut out.  
File supplied as EPS Illustrator with all fonts outlined.
